On – Wood Products care and maintenance sheet

All our Products listed below should be regularly dusted with an antistatic cloth. Should stubborn stains appear, a light solution of liquid soap dissolved in water, or a non-silicone polish can be used, dried with a lint free dry cloth and buffed with a clean antistatic cloth. Do not polish any of the below with wax polish or use abrasive cleaners on them. A yearly inspection by a polishing company, such as A.C. Bean [07815 046 711], is recommended with a view to cleaning and reviving the original surface using the same initial products, of which we will have kept a record or which you will find in your specific O&M manual..
